To: Our Valued American Tube Customers

Re: LEED Certification

American Tube Manufacturing, Inc. confirms that all of our tubing incorporates recycled content steel as well as other Alloys and other Iron materials.

Recycled Content

Our steel suppliers certify that the recycled steel content of their products average approximately 72.9%. Of that an average of 59.7% is Post Consumer Recycled Content and 8.9% is Pre Consumer Recycled Content.

Regional Materials

Our Suppliers track the origin of scrap shipments and can approximate the scrap extracted from the project site region. These sites are most often within 500 miles of the project site.

If you need additional information please let me know.

Sincerely,

A handwritten signature in black ink, appearing to read 'H. Sellers', with a long horizontal flourish extending to the right.

Horace Sellers
Plant Manager
